BALLISTIC RUBBER SOLUTIONS

SUNFLEX
BALLISTIC RUBBER PRODUCTS

Sunflex Ballistic rubber solutions are entirely constructed with ballistic rubber blocks.

Ballistic rubber blocks are produced from recycled rubber with a special binding composition.

Ballistic rubber blocks are used to stop bullets, which helps to prevent ricochets, splatter, and sound abatement and reduce airborne lead containment of standard pistol and rifle rounds up to .308/7.62mm.

Sunflex engineered ballistic rubber solutions demonstrate optimal performance in live fire operational scenarios, covering target hardening and asset protection.

The Ballistic solutions provide the versatility to assemble various temporary or permanent structures, which can be disassembled and reused multiple times.

This facilitates the establishment of an additional security layer while preserving their core functionalities. Withstand extreme conditions without degrading material.

Sunflex Ballistic Rubber Solutions are widely utilised by military and law enforcement agencies worldwide for constructing structures such as guard houses and sangars, as well as reinforcing defensive positions, thereby demonstrating their dependability and efficacy in critical circumstances.
