BALLISTIC RUBBER TILES

SUNFLEX
BALLISTIC RUBBER PRODUCTS

Ballistic rubber tiles are produced from recycled rubber with a special binding composition.

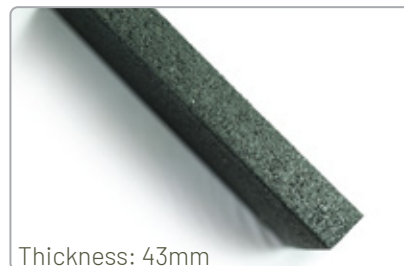

Ballistic rubber panels are used to stop bullets, which helps to prevent ricochets, splatter, and sound abatement and reduce airborne lead containment of standard pistol and rifle rounds up to .308/7.62mm.

Sunflex Ballistic rubber panels offer capabilities and performance with superior quality and durability. The ballistic rubber tiles are high-density, strong, and elastic, providing a safe live-fire environment.

Ballistic rubber panels are designed for use in live shooting ranges. These extra-thick and extremely durable rubber tiles assist in ricochet reduction and help reduce noise levels at firing ranges.

Panels can be applied directly to ballistic steel plate, concrete, plywood using an industrial adhesive or screwing method.

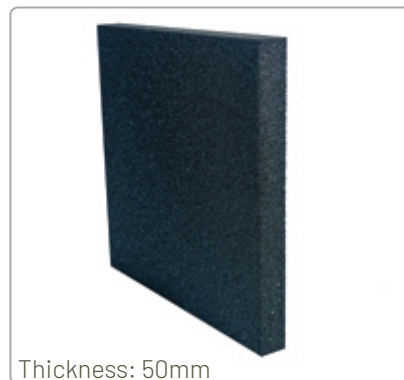

Ballistic rubber tiles are commonly used for tactical shoot houses, mobile modular live ranges, ceiling baffles, shooting range walls, bullet containment systems, and baffle ranges. This provides solutions for military, law enforcement, commercial and residential live ranges.

Thickness: 43mm

Thickness: 50mm

Thickness: 50mm

Thickness: 50mm

Thickness: 30mm

Ballistic rubber tiles are available in various thicknesses and sizes.
